

## Holder for 3.6 V lithium battery with magnets

code: SP015M

Battery holder with magnets SP015M is designed for mounting wireless sensors with Sigfox network output on magnetic surfaces.

It allows you to power the transducer from one or two 3.6V lithium batteries, size "C", thus extending up to six times the operating time compared to the standard life of size "AA" internal battery. It is equipped with a connection adapter that is mounted in place of the transducer's internal battery. The SP015M Batteries holder is suitable for applications where the life of the transducer's internal battery is insufficient and the mains power supply (with optional accessories) cannot be used.

SP015M Batteries holder is supplied separately, without batteries. It is designed for primary lithium batteries 3.6V, size "C". We recommend using Tadiran SL2770/S batteries (order code A4206). One or two batteries can be fitted.

## **Technical data**

Tadiran SL2770/S, lithium, 3.6 V, size"C"
3.6 V DC
max. 200 mA
NO (recommended batteries are not dangerous in the event of a short circuit)
connection adapter for transducers Wx8xx
vertically, cable glanddown
IP65 (after mounting the connection adapter to the Wx8xx sensor)
-30 to +60 °C
200g(including connection adapter)
120 x 93 x 43 mm
